The 5 Most Important Factors When Buying a Water Ionizer

We guarantee that if you stick to this list you will be drinking the purest, healthiest ionized alkaline water available with the best hydrogen and antioxidant levels, -ORP and pH levels.

Plus, you will have the best alkaline water machine that produces many different pH levels for other **non-drinking uses** to help save you money and to help you look and feel great.

1 Plates

The size, type, material and number of plates is what matters the most. Choose a 9-plate or 11-plate unit with Solid/Mesh hybrid plates that are at least 7"x4" (don't skimp on this). Make sure that the ionizer plates are made from medical grade, strengthened titanium that is dipped multiple times in platinum.

2 Filtration

The unit must have 2 filters and they must be Ultra filters only. No exceptions! Make sure the company offers pre-filters for unique water types like well water and soft water, etc

3 Higher amperage means safe drinking water

A 9-plate water ionizer with 8 amps will produce super pH levels and -ORP levels without adding chemicals. An 11-plate ionizer will need 10 amps, no exceptions. Do not buy a unit with a chemical injection port that adds a salt or saline solution unless you are looking to make a form of bleach! Himalayan salts sound exotic, but not when you want pure and healthy ionized water.

4 Must be made in Korea or Japan only and have relevant certifications

Countries like China and Taiwan produce some great products, but not ionizers. They lack strict enforcements, quality control and minimum wage laws. Don't risk your health for a better price. FYI: Insurance companies will not insure water ionizer companies who sell units that are made in some of these countries. Be safe. Check out **Tyent's certifications**.

5 Lifetime warranty and long trial

Tyent USA is the only company who offers a zero-stipulation lifetime warranty and a 75-day trial. Why settle for less?

Luxury Features of Water Ionizers

There are some luxury water ionizer upgrade features that add a nice touch of convenience and sophistication. Look for options like:

- ✓ Under-the-counter styles
- ✓ Design features such as a stainless steel front
- ✓ Flood prevention sensors
- ✓ Advanced touch screens that are digital LCD or smartphone-inspired
- ✓ Automatic self-cleaning features

Tyent alkaline water ionizers produce the purest and healthiest ionized water available!

Bottled Alkaline Water?

When it comes to fresh alkaline water versus bottled alkaline water, there is no comparison! There are many reasons why fresh alkaline water from a water ionizer machine always comes out on top, and you can read how alkaline water from a water ionizer is better than bottled alkaline water here.

5 Top Water Ionizers Compared!

	Tyent	Kangen	Chanson	Jupiter	Air Water Life	Category Winner
Maximum number of plates	11	7	7	9	7	Tyent
Dual Ultra Filtration	YES	NO	NO	YES	NO	Tyent, Jupiter
Turbo Mode Availability	YES	NO	NO	NO	NO	Tyent

GET THE BEST WATER IONIZER FOR THE BEST PRICE

\$895 for a water ionizer is a great deal...or is it? It sure sounds great, especially if the materials and the quality is the same as a \$4,000 water ionizer.

The reality? It's not the same.

Question: So, do I need to buy a \$4,000 water ionizer?

Answer: No!

However...

Choosing a water ionizer that costs around \$800 to \$1200 is not worth the health risk. Here's why: The key components, especially the plates (electrodes) can corrode and poison the water if they are made from subpar materials or metals. Ionizers that are made in China or Taiwan do not have the same strict manufacturing guidelines as Korea and Japan, so don't put your health at risk by taking a chance on water ionizers from China or Taiwan.

5 TIPS ON HOW TO REALLY SAVE MONEY ON A WATER IONIZER

Top Tip: Keep Your Eyes Open for Great Water Ionizer Sales!

1

Shop sales! Many manufacturers, including Tyent, offer sales where you could save \$1,000 or more!

2

Buy medical-grade, platinum-coated titanium plates only. Permelec plates are the best. That way, you can rest assured that you have a lifetime of safe ionized water.

3

Insist on an A+ Rating from the Better Business Bureau which will ensure that the company sells only top-rated water ionizers and that they stand behind quality.

4

Only buy machines with the following water ionizer certifications

Total
Microorganism

Korea Food &
Drug

5

Look for the newest, most advanced water ionizer features to ensure that you get the best negative ORP levels (antioxidants), the best pH levels and the best molecular breakdown for optimal hydration. The key features to insist on are:

- Solid/Mesh hybrid plates (water ionizer electrodes)
- SMPS Plus
- Plates should be at least 7" x 4"
- 9 or 11 plates are now the industry standard for optimal benefits
- Dual filters
- Lifetime warranty with no stipulations. Some companies offer a lifetime warranty but then have pages of small print with stipulations that you need to follow or your warranty will be void. Having to follow these rules can cost you time and money.

Water Ionizers – Japan, Korea, Taiwan or China? Why Does It Matter?

The country of origin of your water ionizer greatly matters! You should know who made your water ionizer machine and where it was made. Quality of manufacturing matters when it comes to water ionizers. Water ionizers that are made in China or Taiwan do cost less, but are you willing to sacrifice the health and safety of you and your family in order to save a few bucks?

Beware of Water Ionizers Made in China or Taiwan!

Water ionizers made in China or Taiwan are not certified lead-free.

Water ionizers made in these countries have been found to have corrosive plate materials.

Water ionizer machines made in these countries are more likely to use titanium-platinum alloy as plate material. Alloys shouldn't be used in water ionizer machines because they don't ionize your water well enough and may leach toxins into your drinking water.

Water Ionizers Are Best When Made in Japan or Korea

Water ionizers are considered medical devices in Japan and Korea, therefore they are more reliable and closely regulated.

Look for water ionizers that are certified by the Korean Food and Drug Administration or the Japanese Ministry of Health.

Korea and Japan abide by strict labor laws, which means that your water ionizer was not made in a sweatshop or by a child laborer.

Made in the USA... Really?

Be wary of water ionizer companies who claim their machines are made in the USA. These ionizers are assembled in America, but the machine parts still come from China! No water ionizer machines are currently manufactured in the United States.

Tyent chose to have its ionizers made in Korea since they were the first to develop a water ionizer. Korea's manufacturing quality and expertise is decades more advanced than any other country. Korea and Japan are the only countries who manufacture medical-grade water ionizers.

Tyent's Top Water Ionizers

Available in 2 styles:

1. Countertop models are available with 9 or 11 plates.
2. Under-the-counter models are also available with 9 or 11 plates.

Tyent's 9 and 11-plate water ionizers are headline-worthy!

- The MMP 9090 Turbo and UCE-9000 Turbo have been written up and bragged about in popular magazines, journals, websites and TV shows.
- Many celebrities and athletes now own a Tyent water ionizer.
- Both units offer a Turbo button that enable the unit to create super pH and -ORP levels.
- Both units carry all of the most important certifications.
- Both units offer more plate surface area than any of our competitors.

2016 Hot Launch

Tyent just released its 2016 all new 11-plate water ionizer, the ACE-11! The ACE-11 features our fastest flow rate ever! This machine is also smaller and streamlined so it fits nice and snug on your countertop. Changing filters is a breeze with our new **Easy Load™ Filters** which you can change from the front of your machine. The Tyent ACE-11 is pre-fitted with the max amperage to give you the highest levels of hydrogen and healthy antioxidants. While our 11-plate unit offers a load of features, there are three really unique and fun features that always make our customers revel in delight.

Tyent Water Ionizer Unique and Fun Features

1

Our smartphone-inspired touch screen is available on both our 9-plate and 11-plate under-the-counter models. It looks so sleek and it's so easy to use.

2

Our units talk! Our units speak 6 different languages and will let you know what level you are drinking, when the unit is going through a cleaning cycle and when to change the filters.

3

Our super fast flow rate is 40% faster than any other ionizer on the market.

What will Tyent think of next? Whatever it is, we will continue to be ahead of the competition.
